

DESCRIPTION

Ultra-flat Roman blind system.

The blind is operated by a polyethylene hinge and stopped by a guillotine device, with manual operation.

The installation, preferably on the window frame or directly on the ceiling, is with snap-on supports that facilitate the removal of the profile.

The installation on the window frame is done without drilling, with fixing by means of a specific invisible double-sided tape that guarantees excellent results.

By not drilling the aluminum and PVC frames, the thermal insulation is not compromised and the warranty of the window frame is maintained.

The Roman blind system uses devices that allow the blind to be removed extremely easily and re-installed with the same speed after washing.

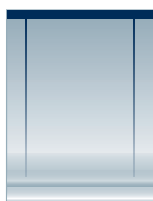

The winding reels, compact systems, are designed to remove the sheet together with its lifting tapes/ropes.

Once the sheet has been washed, simply place it on the system to restore its operation.

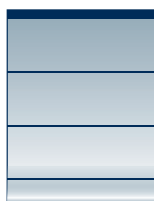

This solution has greatly simplified the maintenance of Roman blinds, allowing their use in both residential and community settings..

TECHNICAL FEATURES

- Fire-retardant filtering or darkening fabric.
